CHAPTER 3

METHODOLOGY

3.1 INTRODUCTION

Research methodology is the process and procedures which by researchers go about their work by collect information and data, describing and explaining.

In this chapter, research methodology act as a guide to the author in order to achieve the research objectives and goals. Research methodology discusses in more detail the research procedures and how the data will be collected and analysed to achieve all the research objectives.

Research methodology should be stated:

- The type of information (data) to be collected.

- How this data will be collected, from the same primary or secondary source.

- The geographical area to be studied and the reason why the location was selected.
• How collected data is analysed so that each one can be fully implemented research information.
3.2 FLOW OF RESEARCH

Start

- Identification of research topic and scope of study

- Literature studies

- Identify problem statements

- Objectives of study
  - Objective 1
  - Objective 2
  - Objective 3

- Scope of study

- Interview

- Data analysis and result

- Conclusion and recommendation

End
