Universiti Malaysia Pahang (UMP)'s position at the national and international levels had indeed been elevated to an upper level following its participation and successes in various research project exhibitions and competitions.

The university took part in four exhibitions, locally and abroad, between January and June 2015 including the Malaysia Technology Expo (MTE), International Invention, Innovation and Technology (ITEX) and Invention and New Product Exposition USA (INPEX).

A total of 31 research projects were submitted and the results were impressive, winning 12 gold medals, 14 silver medals, 5 bronze medals and 2 special awards.

The research projects submitted were selected through a research project exhibition and competition held at the university - the Creation, Innovation, Technology and Research Exposition (CITREx).

It was a platform for UMP's researchers to promote their innovations and inventions before they were selected as entries into national and international level competitions.

Listed below is the total number of medals won by UMP researchers in exhibitions and competitions held at the national and international level between January and June 2015.
