

ADVANCED MATERIAL LABORATORY

Dr. Saifful Kamaluddin
Dr. Izan Izwan Misnon

The course contains practical, and hands-on approach of learning techniques for synthesis, and quantitative and qualitative characterization of materials as applied in industry. Focus of laboratory activities are microstructure analysis techniques (QA and QC); to establish students' deductive skill, most experiment involves further analysis and data manipulation of raw data from advance instrumentation techniques, and also collective data approach in determining a particular material property.

TABLE OF CONTENTS

	Page
EXPERIMENT 1: Observation of Quantum Confinement Effect in CdSe Quantum Dots	1
EXPERIMENT 2: Observation of photoluminescence in Ruthenium-based dye	8
EXPERIMENT 3: Structural study of CdSe nanocrystals (NCs) obtained by mechanical alloying	15
EXPERIMENT 4: Size – Optical Properties Correlation Study in CdSe Quantum Dots (QDs) using Density Functional Theory Calculations	26
EXPERIMENT 5: Synthesis and phase determination of lyotropic liquid crystal	43
EXPERIMENT 6: Conductivity Measurement of Solid Polymer Electrolyte	56
EXPERIMENT 7: Synthesis of ZrO ₂ nanoparticles by microwave irradiation	59
EXPERIMENT 8: Synthesis of nickel copper zinc (NiCuZn) ferrite using auto-combustion technique	62
EXPERIMENT 9: Hydrothermal synthesis of metal organic framework	66
EXPERIMENT 10: Electrospinning - Material synthesis in nanometer dimension	69
APPENDICES	
A Brief Introduction	72
B Template for Laboratory Work Report	93
C Teaching Plan	98
