Integrate sion Making for

Sustainable Product Design

Awanis Romli

School of Engineering

Cardiff University

This thesis is submitted in fulfilment of the requirement of the degree of

Doctor of Philosophy

October 2015

PERPUSTAKAAN UNIVERSITI MALAYSIA PAHANG	
No. Perolehan 113711	No. Panggilan 78 171.4 A93 2015 v Thesis
Tarikh 06 OCT 2016	

LIST OF TABLES

TABLE NO.	TITLE	PAGE
2.1	Sustainability indicators related to the products' development processes (Inoue et al., 2012)	16
2.2	Material selection for eco-design (Prendeville et al., 2014; Zarandi et al., 2011)	17
2.3	Eco-design checklist (Adams, 2006)	19
2.4	Comparison of the CML and TRACI methods (VanDuinen and Deisl, 2009)	22
3.1	Global warming potentials (Defra, 2012)	40
3.2	Normalisation factors (Huijbregts et al., 2005)	41
3.3	Weighting factors for Eco-Indicator 99	42
3.4	List of parameters for Eco-Process modules	51
3.5	Categories of cost solutions	63
4.1	Environmental impact of medical forceps: stainless steel vs. PEEK	76
4.2	Environmental impact of medical forceps: stainless steel vs. PEEK	79
4.3	List of Eco-Process parameters	81
4.4	List of quality characteristics (QCs)	85
4.5	List of demanded qualities (DQs)	86
4.6	Eco-Economic Cost parameters for medical forceps made with PEEK and Stainless Steel	104
4.7	Summary of total life cycle cost comparison	105
5.1	Input data of customer requirements	129
5.2	Conversion environmental impact indicators	131

5.3	The integration of features selection between Eco-QFD and Eco-CBR process	135
5.4	The average value for product design indicator	135
6.1	Features of existing case	142
6.2	Features to compare between existing forceps and revised forceps	144
6.3	Eco-CBR library	145
6.4	Weights (w) assigned for a new case	146
6.5	Transportation group	149
6.6	Material and manufacturing process group	150
6.7	End-of-Life group	150
6.8	Design dimensions group	152
6.9	Cost parameters	154
6.10	Customer requirements input calculation	157
6.11	Qualitative data to numeric scale for environmental Impact indicator	159
6.12	The integration of selection features between Eco-QFD Phase II and Eco-CBR process	160
6.13	Process of calculation for design indicator	161
6.14	Eco-CBR customer solution value aligned with Eco-QFD Phase I	162
6.15	Environmental impact of medical forceps: new design vs existing design	163
7.1	Product design knowledge	168
7.2	Environmental impact of office chair base: nylon vs. aluminium alloy	170
7.3	List of parameters for the quality characteristics (QCs)	171
7.4	List of parameters for the demanded qualities (DQs)	172

7.5	Screenshot of the solution's LCA	186
7.6	Cost parameters	188
7.7	Screenshot for the cost estimation	188
7.8	Screenshot of the customer requirements solution	189
7.9	Screenshot for the solution Eco-QFD indicators	190
7.10	Summary of the LCA by SolidWorks and Eco-CBR tool	193
7.11	Environmental impact of medical forceps: new design vs existing design (per unit)	194

7.12	Eco-CBR Library	182
7.13	Highlighted region of reduced material (Stephens et al., 2015)	184
7.14	Input values for the new case with weights (w) assigned	184
7.15	Screenshot of the retrieved cases	185
7.16	Life Cycle Assessment	187
7.17	The solution for product design dimensions	189
7.18	Insertion of new case into Eco-CBR library (yellow colour)	191
