PREFACE

UHL2422 English for Technical Communication aspires to be a comprehensive Level II English course module for ESL learners undertaking degree programmes in Universiti Malaysia Pahang.

The module covers an array of relevant technical communication topics for academic and professional purposes. The topics are categorised into four major units i.e. Technical Descriptions, Presentation Skills, Process Explanations and Feasibility and Recommendation Reports.

The module provides opportunities for learners to learn and employ appropriate written and spoken technical communication skills and strategies for both lay and professional audiences.

Additionally, learners have the advantage to exercise teamworking skills with the various activities prepared in the module. As well, learners are encouraged to benefit from the online learning resources when they engage in Self-directed Learning activities at the end of each unit.

We hope that learners continue to develop confidence and proficiency in English language upon completion of this English for Technical Communication module.
