

UMP 3D Kufi Innovation Capture Attention

Pekan, 26 December - Islamic calligraphy art or better known as khat is the oldest treasures still owned by Muslims and has been growing all over the world with the growing of Islam itself. Realising the value of Islamic calligraphy art need to be broaden and uplift, a group of lecturers and students from Faculty of Mechanical Engineering (FKM) taken the initiative to innovate the creation of kufi, to produce high quality of kufi within the shorter period of time.

Kufi 3D Head of Designer at Wooden Technology, Mohd Hamka Mohd Jaapar said that initially this idea came to light after they made some observations and find out that kufi is a product that is high in demand but very low in supply. Therefore they came out with this idea to polish existing skills and use existing technologies to meet consumer demand.

"Wooden Technology have produced wood based products using computer numerical control (CNC) machine to produce products such as kufi, keychain and various other products", he explained further.

He added that Wooden Technology has worked closely with the United Nation Educational, Scientific and Cultural Organization (UNESCO) for research technology under the supervision of FKM lecturers, Ir. Dr. Akhtar Razul Razali and Dr. Fadhlur Rahman Romlay.

"Our team is the only start-up company that has been selected as an exhibitor for the 5th Global Entrepreneurship Community Summit 2017 organized by the Ministry of Finance Malaysia (MoF) which was held on 12 and 13 December 2017 at the Kuala Lumpur Convention Center (KLCC)," said Mohd. Hamka.

For those who are interested to know more on the product, please call 010-9182482 or enquiry can be made at their Facebook page, KUFU WOOD 3D.
