ACKNOWLEDGEMENTS

First and foremost, I want to acknowledge and thank to ALLAH SWT with my deepest gratitude for the miracles He has performed in my life for the completion of Final Year Project (FYP). I have to thank my research supervisors, En Mohammad Syamsyul Hairi bin Saad. Without his assistance and dedicated involvement in every step throughout the process, this paper would have never been accomplished. I would like to thank you very much for your support and understanding over these past four years.

Getting through my dissertation required more than academic support, and I have many, many people to thank for listening to and, at times, having to tolerate me over the past three years. I cannot begin to express my gratitude and appreciation for their friendship, Mohamad Kamal Ghani, Azizi Alias and Hafizudin Bakhri, Nur Azuwa Ghazali, Nur Izzati Adnan, have been unwavering in their personal and professional support during the time I spent at the University.

Most importantly, none of this could have happened without my family. My mother, who offered her encouragement through phone calls and letters every week – despite my own limited devotion to correspondence. With her own brand of humor, Puan Zainap binti Yusof has been kind and supportive to me over the last several years. To my parents and my siblings– it would be an understatement to say that, as a family, we have experienced some ups and downs in the past three years. Every time I was ready to quit, you did not let me and I am forever grateful. This dissertation stands as a testament to your unconditional love and encouragement.
