Preface

Microorganisms create a structurally varied category of surface-active chemicals known as biosurfactants. Biosurfactants have been investigated as a potential substitute for synthetic surfactants in numerous industrial processes, including food, medicine, biotechnology, petroleum, oil recovery, biomedical and therapeutic, and bioremediation, due to the rising worldwide need for sustainable solutions. The book will cover a variety of current biosurfactants research advancements and progresses. The book will also cover the most recent academic advances, major applications, and implementation studies from across the world. It will be a valuable resource for research organizations, research institutes, university libraries, and R&D involved in recent surfactant research and development.

The book is divided into four parts, and each part contains numerous chapters. PART 1 explores the “overview and economic aspect of biosurfactants production.” Topics covered in Chapters “Biosurfactants: Types, Sources, and Production” to “Surface Activity and Emulsification Properties of Saponins as Biosurfactants” are types, sources, characterization, purification, biodegradation, and cytotoxic aspects of biosurfactants. PART 2 discusses the biosurfactant’s industrial applications. Topics covered in Chapters “Biosurfactants as Emulsifying Agents in Food Formulation” to “The Role of Biosurfactants in Biofuel Production” are the application of biosurfactants in nanoparticle synthesis, heavy metal remediation, drug absorption, waste treatment, agriculture management, marine sediment remediation of organic pollutants, biofuel production, emulsification, and anti-corrosive applications. PART 3 discusses the biosurfactant’s biomedical applications. Topics covered in Chapters “Role of Biosurfactants in Biocidal Activity and Wound Healing” to “Role of Biosurfactants in Biofilm Prevention and Disruption” are the application of biosurfactants as biocidal, wound healing, and anti-tumor agents. This section also covers the applications of biosurfactants in oral cavity care, and biofilm prevention and disruption. PART 4 discusses the biosurfactant’s commercialization, challenges, and future outlook. Topics covered in Chapters “Advantages and Disadvantages of Biosurfactants over Other Synthetic Surfactants” to “Biosurfactants: Challenges and

Future Outlooks” are the advantages of biosurfactants over synthetic surfactants, commercialization, challenges, and future outlook of biosurfactants.

This book is intended for a very wide-ranging audience working in the fields of advanced surface science, chemistry, colloids and interfaces science, chemical engineering & technology, etc. This book will be an invaluable reference source for libraries in universities and industrial institutions, government and independent institutes, individual research groups, and scientists. Overall, this book is written for scholars and students in academia and industry, working in the field of colloids and interface science, applied and engineering chemistry.

The editors and contributors are renowned researchers and scientists from academia. On behalf of Springer-Nature, we are very thankful to the contributors of all chapters for their amazing and passionate efforts in the making of this book. Our special thanks are dedicated to Dr. Cansu Kaya (Associate Editor) and Mr. Srinivasan Manavalan (Project Coordinator) and the Editorial Team at Springer-Nature for their devoted support and help during this project. In the end, all gratitude goes to Springer-Nature for publishing the book.

Contents

Part I Overview and Economic Aspect of Biosurfactants Production	
Biosurfactants: Types, Sources, and Production	3
Ruby Aslam, Mohammad Mobin, Saman Zehra, and Jeenat Aslam	
Innovative and Sustainable Production Processes for Biosurfactants . . .	25
Talita Corrêa Nazareth Zanutto, Luís Antonio Lourenço, and Danielle Maass	
Sustainable Production of Biosurfactants Using Waste Substrates	57
Catherine N. Mulligan	
Characterization and Purification of Biosurfactants	79
Mridul Kumar Medhi, Shweta Ambust, Rajesh Kumar, and Amar Jyoti Das	
Biodegradation and Cytotoxic Effects of Biosurfactants	95
Sethuramalingam Balakrishnan, Marimuthu Ragavan Rameshkumar, Chandrasekaran Krithika, Avoodaiappan Nivedha, Dakshinamurthy Thirumal Kumar, and Narasingam Arunagirinathan	
Comparison of Biodegradability, and Toxicity Effect of Biosurfactants with Synthetic Surfactants	117
Natalia Andrade Teixeira Fernandes, Luara Aparecida Simões, and Disney Ribeiro Dias	
Surface Activity and Emulsification Properties of Saponins as Biosurfactants	137
Sweeta Akbari, Nour Hamid Abdurahman, and Viacheslau Kudrashou	

Part II Biosurfactants: Current Industrial Applications

Biosurfactants as Emulsifying Agents in Food Formulation	157
Oluwaseun Ruth Alara, Nour Hamid Abdurahman, John Adewole Alara, Chinonso Ishmael Ukaegbu, Moses Oludayo Tade, and Hassan Alsaggaf Ali	
Application of Biosurfactants as Anti-Corrosive Agents	171
Saman Zehra, Mohammad Mobin, and Ruby Aslam	
Role of Biosurfactants in Nanoparticles Synthesis and their Stabilization	191
Sahibzadi Saira Saleem, Saqib Saleem, and Muhammad Faizan Nazar	
New Trends in the Textile Industry: Utilization and Application of Biosurfactants	215
Júlio Cesar Vasconcelos dos Santos, Andrea Fernanda de Santana Costa, Thayse Alves de Lima e Silva, Leonie Asfora Sarubbo, and Juliana Moura de Luna	
Biosurfactants as an Eco-Friendly Technology in Heavy Metal Remediation	225
Renata Raianny da Silva, Yali Alves da Silva, Thayse Alves de Lima e Silva, Leonie Asfora Sarubbo, and Juliana Moura de Luna	
Biosurfactants and Their Perspectives for Application in Drug Adsorption	237
Thaís Strieder Machado, Bruna Strieder Machado, Danielli Martins Sanderi, Giovana Marchezi, Larissa Crestani, Luciane Maria Colla, and Jeferson Steffanello Piccin	
Role of Biosurfactants in Promoting Biodegradation in Waste Treatment	257
Brian Gidudu and Evans M. N. Chirwa	
Role of Biosurfactants in Agriculture Management	277
Asif Jamal, Muhammad Ishtiaq Ali, Malik Badshah, and Aetsam Bin Masood	
Biosurfactants and Their Benefits for Seeds	309
Luara Aparecida Simões, Natalia Andrade Teixeira Fernandes, Nelson Augusto dos Santos Junior, and Disney Ribeiro Dias	
Role of Biosurfactants in Marine Sediment Remediation of Organic Pollutants	331
Chiamaka Linda Mgbechidinma, Yeting Xie, Xiaoyan Zhang, Guiling Wang, and Chunfang Zhang	

The Role of Biosurfactants in Biofuel Production	371
O. E. Oyetunji, B. C. Kotun, O. A. Thonda, and E. A. Ademola	

Part III Biosurfactants: Current Biomedical Applications

Role of Biosurfactants in Biocidal Activity and Wound Healing	399
John Adewole Alara, Oluwaseun Ruth Alara, and Nour Hamid Abdurahman	

Biosurfactants as Potential Antitumor Agents	439
C. I. Ukaegbu, S. R. Shah, R. O. Alara, and O. A. Thonda	

Biosurfactants in Oral Cavity Care	461
Avoodaiappan Nivedha, Chandrasekaran Krithika, Ravanasamudram Sundaram Neelakandan, Sethuramalingam Balakrishnan, Marimuthu Ragavan Rameshkumar, and Narasingam Arunagirinathan	

Role of Biosurfactants in Biofilm Prevention and Disruption	481
Chandana Malakar, Suresh Deka, and Mohan Chandra Kalita	

Part IV Biosurfactants: Commercialization, Challenges and Future Outlook

Advantages and Disadvantages of Biosurfactants over Other Synthetic Surfactants	505
Jyoti Sharma, D. Sundar, and Preeti Srivastava	

Commercialization of Biosurfactants	525
Oluwaseun Ruth Alara, Nour Hamid Abdurahman, John Adewole Alara, Moses Oludayo Tade, and Hassan Alsaggaf Ali	

Biosurfactants: Challenges and Future Outlooks	551
Arif Nissar Zargar, Manoj Kumar, and Preeti Srivastava	

Biosurfactants as Potential Antitumor Agents

C. I. Ukaegbu, S. R. Shah, R. O. Alara, and O. A. Thonda

1 Introduction

Biosurfactants are microorganism-produced molecules with surface activity that can be used in a variety of biomedical applications. They are microbially produced amphiphilic surface-active chemicals with significant implications in medicine, food, and bioremediation. Exopolysaccharide (EPS) sheaths surround bacteria in biofilms, protecting them from harmful circumstances. Chemical surfactants have long dominated the market, but attention has recently shifted to the extraction of biosurfactants with reduced toxicity and increased biodegradability (Peele and Ch 2016). Biosurfactants have an intriguing biological activity profile and could potentially be used as antitumor medicines. Biosurfactants have in-vitro antiproliferative activity as reported against human lung cancer cells, as well as antibacterial activities against certain pathogens (Karlapudi et al. 2018). Although biosurfactants have been identified as potential antimicrobial drug candidates in numerous studies, their role in cancer biology has been understudied.

Biosurfactants' antitumor potential is being investigated, even though data on the mechanisms of such action are still rare (Gudiña et al. 2013; Rodrigues 2011). Several studies have shown that biosurfactants separate at interfaces, influencing the adherence of microbes (Rivardo et al. 2009; Mireles et al. 2001; Velraeds et al. 1998). By breaking and lysing microbial cell membranes, these chemicals can
